## ABOUT US

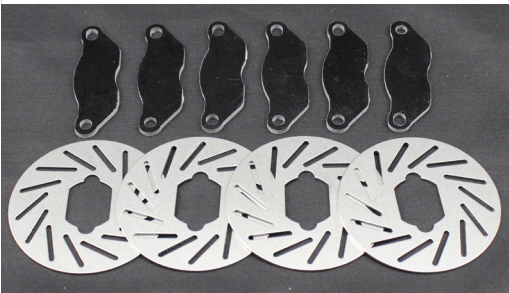

FID Racing is founded in 2013. Since then we are specialized in designing and manufacturing upgrade parts for a variety of popular 1/5 scale model cars. Our upgrade parts have served to solve the issues of original design and improve car performance. Moreover FID Racing developed some innovative and original parts and systems that add new features and functions and bring huge performance improvement, like our electric starter, pull starter, automatic reverse system, 2-speed transmission system etc.

Most of our parts are made of billet aluminum alloy, CNC machined. Other materials like steel, fiber glass, nylon are also used to suit the purpose. To enhance parts' performance and life, we use a lot of different manufacture methods like powder metallurgy, die cast, anodize, blue, black oxidate, thermal treatment etc. Quality is always our focus.

In future our upgrade parts lineup will cover most of the trending models, and FID RACING will bring more high quality upgrade choices for our hobbyists.
